[Subject]: COPA-DATA and CRA

Dear Customer,

Cybersecurity has become an ever increasingly important aspect of developing, deploying and maintaining software. COPA-DATA recognizes the importance of cybersecurity in safeguarding its own operations and in protecting its customers' interests.

In a landscape that sees plenty of activity, not just in the actors and technologies, but also in the legislations and standards, COPA-DATA has been closely following the development of the European Union's Cyber Resilience Act (CRA), and its implications for COPA-DATA as a software vendor and component provider.

Overall, the CRA mandates that manufacturers of products with digital elements are responsible for their cybersecurity throughout the entire lifecycle. In this, COPA-DATA is already ahead with the certification of the software development lifecycle for the zenon Software Platform in accordance with the international standard IEC 62443-4-1.

As the understanding of the CRA evolves, COPA-DATA had been expending effort in the process of aligning its products to the technical requirements highlighted in Annex I, Part I of the act. Nonetheless, COPA-DATA is closely observing the developments surrounding the CRA, while preparing internally to reach compliance.

Kind regards,

Signed by:

Lukas Punzenberger
